

Q2. Explain the use of External CSS?

Ans:- To apply a rule to multiple pages, an external style sheet is used. An external style sheet is a separate CSS file that can be accessed by creating a link within the head section of the webpage. Multiple webpages can use the same link to access the stylesheet.

- One change to the style sheet will change all linked pages
- you can create classes of styles that can then be used on many different HTML elements.
- Consistent look and feel across multiple web pages.
- Improved load times because the CSS file is downloaded once and applied to each relevant page as needed.
