Q2. Explain the use of external CSS.

An external style sheet is a separate file linked to an HTML web page. It comes with a .css filename extension. All the styles that need to be used on a website can be declared in the external style sheet. External style sheets are an important tool from the webmaster's perspective.

Example:

```
<head>
<link rel="stylesheet" type="text/css" href="mystyle.css">
</head>
```

Example

```
<!DOCTYPE html>
<html>
<head>
  <link rel="stylesheet" href="styles.css">
</head>
<body>

<h1>This is a heading</h1>
<p>This is a paragraph.</p>

</body>
</html>
```

"styles.css":

```
body {
  background-color: powderblue;
}
h1 {
  color: blue;
}
p {
  color: red;
}
```
